Inner Views: Gynecologic Endoscopy Procedures

Sant'Andrea Hospital, Rome, Italy

Tecnopolo, Castelromano (RM)

COURSE

LIVE SURGERY (Days 8th and 10th)

We are very proud to offer the audience two days of carefully selected live surgery. Each live session will focus on dedicated topics such as general gynaecological interventions, hysteroscopy, oncology, etc.

HANDS-ON TRAINING (Day 9th)

This course is designed for gynecologists looking to improve their ability and capacity in surgical laparoscopy. The course consists in practical sessions, and is designed to provide a limited number of participants with total hands-on experience using the most current technologies available for laparoscopic dissection and suturing.

The unique aspect of this course will be the incorporation of live surgery in live pigs with a special focus on management and repair of laparoscopic complications. During this workshop, each participant will operate, assist and observe. This rotation format is particularly effective for learning pelvic anatomy and laparoscopic suturing skills. The tutors will lead participants through procedures such as dissection of retroperitoneal space, electrosurgical instrument use, uretral dissection and anastomosis, vascular dissection, injury and repair, bowel injury and repair.

TOPICS AND KEY-NOTE LECTURES

Innovations in Surgery

3D Anatomy

Intestinal Tract Management

Endometriosis

Oncology

Infertility

Theoretical sessions and lectures will be held in Castelromano on day 9th ; at DSDMT on day 11th (9.00 am- 1.00 pm)
